AAI-511-IN2_Final Project Team-13_Music_Composer

August 9, 2025

1 Title of the Project

!!! The Neural Ear: Unearth the Composer of your Music!!!

1.1 Author Details

Name: Ravi Teja Kothuru
Course Code: AAI-511-IN2

• Course Name: Neural Networks and Deep Learning

• University of San Diego

• Instructor: Prof. Anamika Singh

• **Date:** 11th August 2025

Description: The goal of this project is to create a deep-learning-based system that can classify the musical composer of the musical score. The project will only explore four well-known individuals in Western classical music - Bach, Beethoven, Chopin, and Mozart!

Objectives: The project will utilize the midi_classic_music dataset available from Kaggle that hosted 3929 midi files of classical musical scores with 175 different composers including Bach, Beethoven, Mozart, Brahms, Chopin, Tschaikovsky, Strauss, Stravinski, Prokofiev, Rachmaninov, Bernstein, Bartok, Handel, Ravel, Scriabin, etc. The challenge will be to build a good classification model with two state-of-the-art deep learning models: Convolution Neural Networks (CNN) and Long Short-Term Memory Networks (LSTM) as these two models were chosen for their ability to learn spatial patterns and temporal patterns from music.

The MIDI file is not an audio recording. Rather, it's a recipe to an audio that explains what notes to play, when to play etc. It is a set of instructions such as pitch, note, tempo etc., that contain musical performance data used for electronic music production.

Data Source: Kaggle - https://www.kaggle.com/datasets/blanderbuss/midi-classic-music/data

As mentioned in the Dataset description in Kaggle, it contains 3929 midi files of classical works by 175 composers including Bach, Beethoven, Mozart, Brahms, Chopin, Tchaikovsky, Strauss, Stravinski, Prokofiev, Rachmaninov, Bernstein, Bartok, Handel, Ravel, Scriabin, and others.

Number of Variables: Because the dataset is MIDI, and thus not a tabular CSV, there are not "columns" or "variables" to speak of. Rather, the information is encoded in the MIDI format, and from the MIDI files, the following features can be extracted: - Note pitch values - Note onset (start time) and offset (duration) - Tempo - Velocity (intensity of note) - Time signature & key signature (when available) - Chord progressions and patterns

The class label (i.e. composer name) is typically inferred from the file name or folder structure of each MIDI file.

2 Import libraries and packages as needed

[]: !pip install pretty-midi

Collecting pretty-midi Downloading pretty_midi-0.2.10.tar.gz (5.6 MB) 5.6/5.6 MB 44.7 MB/s eta 0:00:0000:0100:01 Preparing metadata (setup.py) ... done Requirement already satisfied: numpy>=1.7.0 in /usr/local/lib/python3.11/distpackages (from pretty-midi) (1.26.4) Collecting mido>=1.1.16 (from pretty-midi) Downloading mido-1.3.3-py3-none-any.whl.metadata (6.4 kB) Requirement already satisfied: six in /usr/local/lib/python3.11/dist-packages (from pretty-midi) (1.17.0) Requirement already satisfied: packaging in /usr/local/lib/python3.11/distpackages (from mido>=1.1.16->pretty-midi) (25.0) Requirement already satisfied: mkl fft in /usr/local/lib/python3.11/distpackages (from numpy>=1.7.0->pretty-midi) (1.3.8) Requirement already satisfied: mkl random in /usr/local/lib/python3.11/distpackages (from numpy>=1.7.0->pretty-midi) (1.2.4) Requirement already satisfied: mkl umath in /usr/local/lib/python3.11/distpackages (from numpy>=1.7.0->pretty-midi) (0.1.1) Requirement already satisfied: mkl in /usr/local/lib/python3.11/dist-packages (from numpy>=1.7.0->pretty-midi) (2025.2.0) Requirement already satisfied: tbb4py in /usr/local/lib/python3.11/dist-packages (from numpy>=1.7.0->pretty-midi) (2022.2.0) Requirement already satisfied: mkl-service in /usr/local/lib/python3.11/distpackages (from numpy>=1.7.0->pretty-midi) (2.4.1) Requirement already satisfied: intel-openmp<2026,>=2024 in /usr/local/lib/python3.11/dist-packages (from mkl->numpy>=1.7.0->pretty-midi) (2024.2.0)Requirement already satisfied: tbb==2022.* in /usr/local/lib/python3.11/distpackages (from mkl->numpy>=1.7.0->pretty-midi) (2022.2.0) Requirement already satisfied: tcmlib==1.* in /usr/local/lib/python3.11/distpackages (from tbb==2022.*->mkl->numpy>=1.7.0->pretty-midi) (1.4.0) Requirement already satisfied: intel-cmplr-lib-rt in /usr/local/lib/python3.11/dist-packages (from mkl_umath->numpy>=1.7.0->prettymidi) (2024.2.0) Requirement already satisfied: intel-cmplr-lib-ur==2024.2.0 in /usr/local/lib/python3.11/dist-packages (from intelopenmp<2026,>=2024->mkl->numpy>=1.7.0->pretty-midi) (2024.2.0) Downloading mido-1.3.3-py3-none-any.whl (54 kB) 54.6/54.6 kB

3.2 Collect MID files for each top folder and subfolders

We are considering only Bach, Beethoven, Chopin and Mozart as mentioned in the project guidelines.

```
[]: # Set the path where the MIDI files are stored
DATA_DIR = "/kaggle/working/extracted_files/"

# List of composers we want
TARGET_COMPOSERS = ["Bach", "Beethoven", "Chopin", "Mozart"]
```

```
[]: # Run the function
midi_files_by_composer = collect_midi_files(DATA_DIR, TARGET_COMPOSERS)
```

```
[INFO] Bach: 1024 files collected
[INFO] Beethoven: 213 files collected
[INFO] Chopin: 136 files collected
[INFO] Mozart: 257 files collected
```

3.3 Check if any other files are available in the folders apart from .mid or .midi

```
[]: def list_unique_file_extensions(root_folder):
    extensions = set()

for dirpath, _, files in os.walk(root_folder):
    for file in files:
        if '.' in file:
            ext = file.lower().rsplit('.', 1)[-1]
            extensions.add(ext)
    else:
        extensions.add('NO_EXTENSION')
```

```
[]: # Example usage
for target_composer in TARGET_COMPOSERS:
    unique_exts = list_unique_file_extensions(f"{DATA_DIR}/{target_composer}")
    print(f"Unique file extensions found for {target_composer}:", unique_exts)
```

```
Unique file extensions found for Bach: {'NO_EXTENSION', 'mid'}
Unique file extensions found for Beethoven: {'zip', 'mid'}
Unique file extensions found for Chopin: {'mid'}
Unique file extensions found for Mozart: {'mid'}
```

4 Data Pre-processing

4.1 Perform Data Augmentation for the MIDI Files and Label each of them

```

Beethoven - Sample Piano Roll: Lieder op48 n4 ''Die Ehre Gottes Aus Der Natur''.mid

Chopin - Sample Piano Roll: Mazurka op67 n3 Drchew.mid

Mozart - Sample Piano Roll: Symphony n36 K425 1mov ''Linz''.mid

5 Feature Extraction

5.1 MIDI Feature Extraction Notes

I used music21 for parsing and feature extraction. It's designed for symbolic music analysis pipelines but it can be a bit slower when working with larger collections - using their parallel processing is a great option.

5.1.1 Performance Notes

- Parallelism: Enabled using concurrent.futures to help speed up the multi-file extraction.
- CPU Use: dependening on the amount of usable RAM try adjusting max_workers i.e. min(6, os.cpu_count()-1) to balance speed with memory.
- Large Files: Even with orchestral MIDIs or pieces that have higher resolution can take a few extra seconds per files when using music21 for parsing.

5.1.2 Extracted Features Overview

Feature	Description	Why It Matters for Classification
notes	List of note pitches (encoded as MIDI numbers).	Core melodic content, as composer styles often diverge in their pitch usage.

Feature	Description	Why It Matters for Classification
chords	List of chord symbols (root + quality).	Harmonic vocabulary - composers tend to favor certain chord progressions.
tempo	Average beats-per-minute derived from MIDI tempo events.	Represents pacing - for example, Romantic composers vs Classical composers often tend towards different average tempos.
time_signatur	_	Temporal structure - different repetitions; e.g., Waltz $(3/4)$ vs March $(2/4)$.
rhythm_iois	Inter-onset intervals between the consecutive notes.	Represents the variation and complexity of rhythms.
key_signature	esTonal key(s) detected (e.g., C	Tonal center - tonal preferences often define composers.
instruments	major, A minor). Instruments used in the piece (if paid attention to and encoded).	Orchestration styles; even for piano works, encoding can still be useful.
articulations	,	Expressive detail - composers differ in articulation density.
dynamics	Relative loudness/volume markings (p, mf, f, etc.).	Expressive quality dynamics - may function as a stylistic fingerprint in scores by a composer.
polyphony_ser	riesunt of notes per time step.	The most useful number, effectively counts texture density at a point in time; polyphonic writing is far more complex.
polyphony_avg	Average simultaneous notes.	Capture standard texture.
polyphony_max	Maximum simultaneous notes.	Capture dense climaxes.

5.1.3 Quantization

- Polyphony is calculated after the notes are quantized to a grid (quantize_step_q = 0.25 quarter notes by default).
- A smaller grid increases polyphony resolution (but increases computation time).

5.1.4 Limits

- Articulations/Dynamics: Only extracted if present explicitly in the MIDI or score; most MIDI files do not include these.
- Instrument Metadata: May not be available can be None for some files.
- **Tempo Changes**: Only the average tempo is reported; in order of expressive timing, a tempo curve must be evaluated.

5.1.5 Next Steps After Extraction

- 1. Look over results ensure that the all features were extracted correctly (NaN handling).
- 2. Save the extracted dataframe as .pkl or .parquet.
- 3. **Feature engineering** explicate symbolic features into numeric vectors (piano roll, chroma, event sequences, statistical summaries).
- 4. **Model Training** use the features processed for the classification model.

```
[]: def extract features from midi(midi_path, quantize_step_q=0.25):
         Extract features from a single MIDI file using music21.
         quantize\_step\_q: quantization step in quarter lengths used to compute_{\sqcup}
      ⇔polyphony stats.
         Returns dict with 'ok' boolean and either 'result' or 'error'.
         .....

7.3 Observations from the CNN Base Model

- A ~77% test accuracy is similarly respectable but not perfect.
- The model performs very well on class 0 (probably Bach) with precision and recall both high.
- Classes 1, 2, and 3 have comparatively lower precision and recall, class 2 (maybe Chopin?) having low recall (0.21) and f1 (0.32).
- The model clearly predicts many classes with class 3 as the predicted label (there's a lot of label confusion that suggests many misclassifications into class 3).
- This can depend on class imbalance or not enough features for those composers.
- Because of class imbalance, we got such plateaued graphs for validation accuracy and validation loss.

accuracy			0.71	308
macro avg	0.54	0.52	0.53	308
weighted avg	0.70	0.71	0.71	308

7.7 Observations from LSTM Base Model

- A test accuracy ~71% is reasonable, meaning the model learned some patterns.
- Precision/recall/F1 for class 0 (Bach) is high (~90%), but other composers are much lower (~40%). This fits with your class imbalance.
- Macro avg F1 ~0.53 tells you that the model is having a tougher time on the less represented composers.

7.8 Finetune LSTM Model (Bidirectional LSTM) with multiple techniques along with handling class-imbalance

```
[]: # Compute class weights to address imbalance
     class_weights_arr = compute_class_weight(
         class_weight='balanced',

7.9 Observations from finetuned LSTM (Bidirectional LSTM)

- Test accuracy: 75% (up from ~71%).
- Much better balanced class-wise recall and f1-scores and more improvement in the minority classes (e.g. class 2 recall increased from 0.32 to 0.68).
- Stable training with early stopping and LR reduction.
- The introduction of class_weight for class imbalance handling allowed minority classes to be more effectively focused on.
- When using Bidirectional LSTMs with recurrent dropout, we have better ability to capture context and regularize overfitting.

- The use of early stopping combined with ReduceLROnPlateau allowed the model to train efficiently without overfitting or plateauing too soon.
- Precision/recall for the smaller classes remain as an area for improvement, and will continue to be something to investigate further.

Overall Observations and Final Conclusion

8.1 Observations from MIDI File Collection Script

1. Dataset Structure and File Collection

- The code traverses the directory at /kaggle/working/extracted files/ to find MIDI files relating to four target composers:
 - Bach
 - Beethoven
 - Chopin
 - Mozart
- For each of the composers, it recursively collates all files that are either.mid or .midi.
- The number of file counts captured per composer are as follows:

- **Bach:** 1024 files - Beethoven: 213 files - Chopin: 136 files - Mozart: 257 files

• If a composer's directory is not located, a warning is printed.

2. File Extension Analysis

• The code prints all unique file extensions that it finds in each composer's folder.

• The unique file extensions we observed per composer are as follows:

- Bach: 'mid'; also some files without an extension ('NO_EXTENSION')

- Beethoven: 'mid' and some 'zip' files

- Chopin: only found only 'mid'

- Mozart: found only 'mid'

3. Key Takeaways

- Class Imbalance: As you can see, this dataset is imbalanced, with Bach having many more files (1024) than Chopin (136) or Beethoven (213), which may need to be addressed during training of our model.
- File Types: most of the files are in the .mid format and there may be a few others without an extension. We see .zip files in Beethoven's, and NO_EXTENSION files in Bach's. We will also need to consider how we will handle or perform data cleanup on these files.

• Data Integrity Check: The presence of files with no extension or zip files tells us that the dataset may have some raw or compressed data and that will require more pre-processing.

8.2 Observations from MIDI Data Augmentation Script

Functionality Overview

- The augmentation script uses random pitch shifts, random changes in velocity, and small time scaling to augment MIDI files by affecting each note.
- Each input MIDI file is augmented multiple times (num_augments), and produced new MIDI files in an output folder.
- The augmentation script runs in batches to speed up processing, as each batch augments the specified number of input MIDI files.
- Errors that occur when reading the files or during file augmentation are collected and printed.

Augmentation Details

Augmentation Aspect	Description	Value Range / Choices
Pitch Shift Velocity Variation	Random adjustment of the note pitch Random adjustment of the note velocity	-2, -1, 0, 1, 2 (semitones) ± 10 (clamped between 0 and 127)
Time Scaling	Stretching or compressing the start and end timing of the note	0.9, 1.0, 1.1 (scale factor)

- Both pitch and velocity adjustments are clamped to the valid MIDI range (0-127).
- Time scaling affects the timing of notes either 10% quicker or slower, or not at all.

Parallel Processing & Batching

- The software finds all of the MIDI files in the input folder (and all subfolders) with a .mid or a .midi extension.
- Files are processed in batches of files (default batch size is batch_size=10).
- Parallel Work is done using Python's ProcessPoolExecutor, using as many workers as available CPU's.
- Progress of all these files being augmented is displayed using tqdm progress bars for each batch.
- The errors related to augmentation are collected and printed after each batch.

Example Usage Summary

					Max	
			Num	Batch	Workers	
Composer	Input Folder	Output Folder	Augments	Size	(CPUs)	
Bach	/kaggle/working/ex	tra ćkad g fėlæsyRand /Ba	ach augmente	d 10	os.cpu coun	t()

Compose	r Input Folder	Output Folder	Num Augment	Batch s Size	Max Workers (CPUs)
Beethoven/kaggle/working/extrackaggfelws/Reeg/Beethoven_augmented os.cpu_count					os.cpu_count()
Chopin	/kaggle/working/	extra ¢kæggfé/æsr⁄Khop/6	hopi h_ augme	ntel®	os.cpu_count()
Mozart	/kaggle/working/	extra ćkaggfė/ks/Mòzg/M	ozar %_ augme	ntel®	os.cpu_count()

Key Takeaways

- The augmentation will expand the dataset size by the number of instances specified in num_augments (for example, 3x augmentation tripling the dataset size)
- Randomization of pitch, velocity, and timing to ensure useful variability exists to train large robust models.
- Batch and parallel processing in order to help with optimization of augmentation run time with larger datasets.
- Good error handling to be aware of corrupt or troublesome MIDI files without crashing the entire process.

Potential Improvements or Considerations

- Logging, or memorizing more detailed statistics regarding the augmentation (for example, how many files failed).
- More augmentation types can be added (for example, adding noise, removing notes).
- A verification step to make sure any augmented MIDI files are playable and valid.
- Ability to define ranges of pitch/velocity/time enhancements for each run.

8.3 Findings from Midi midi dataset analysis per Composer

• Class Distribution:

The distribution classes appear to be imbalanced where Bach has the most midi files, followed very closely by Mozart and Beethoven, and then lastly having Chopin that has the least.

• Duration Analysis:

The duration of the scores show that Bach's compositions are generally shorter in duration with more uniformity over the same total duration. Mozart and Beethoven on the other hand showed distributions that were more varied in duration.

• Note Count:

The counts of notes vary greatly across the composers, but Bach and Mozart had a higher median note count compared to Beethoven and Chopin.

• Pitch Distribution:

While all four composers generally used pitches in the mid-MIDI program range (approximately 40-80), Bach's compositions notably used higher MIDI pitch numbers at both ends of the MIDI program range.

• Tempo tendencies:

The tempo distributions of the scores overlapped somewhat but the average BPM of Mozart

tends to be higher than Beethoven, while the average BPM of Chopin sits at slower BPMs at either end of the tempo distributions.

• Instrument usage:

Bach had the most coverage of different instruments in the whole dataset, which is also reflected in the counts of a good number of the MIDI program numbers where there are higher counts of instrumentations than any other composer.

• Piano-Roll Visualizations:

When looking at the piano-roll visualizations of the tracks, it is clear to see the differences in compositional styles. Bach's piecied often show very dense periods of notes, while Beethoven generally shows a more spread distribution of notes over time.

8.4 Observations from MIDI Feature Extraction and Preprocessing

Feature Extraction from MIDI Data

- Transform MIDI note features to fixed-size 2D matrices (max_notes=168), with note features in each row.
- Note features include:
 - Pitch (0-127)
 - Duration (quarter notes)
 - Velocity (0-127)
 - Offset (start time) in quarter notes
 - Articulation (binary flags for staccato, accent, and tenuto)
- If a piece contains less than 168 notes, the matrix will be zero-padded; if it contains more than 168 notes, the matrix will be truncated.

Feature Matrix Shape per Composer

Composer	Number of files	Feature Matrix Shape
Bach	925	$(168 \text{ notes} \times 7 \text{ features})$
Beethoven	212	$(168 \text{ notes} \times 7 \text{ features})$
Beethoven	136	$(168 \text{ notes} \times 7 \text{ features})$
Beethoven	257	$(168 \text{ notes} \times 7 \text{ features})$

• Labels are assigned to each sample by composer and number of feature matrices.

Padding and Standardization of Feature Cubes

- Feature matrices were padded/truncated row-wise to have the same height (max_row_count=168).
- Feature columns are also padded once by composer to have the maximum number of columns.
- A StandardScaler was fit and applied to flattened feature cubes, effectively normalizing features across all samples.
- The resulting standardized feature cubes have the shape (samples, 168, num features).

312

Final Feature Shapes After Padding and Standardization

Composer	Final Feature Cube Shape
Bach	(925, 168, 7)
Beethoven	(212, 168, 7)
Beethoven	(136, 168, 7)
Beethoven	(257, 168, 7)

• Composers use the same dimensions, allowing for agreement of input to a model.

Train-Test Split and Dataset Combination

Dataset Split	Number of Samples	Feature Shape	Label Shape
Training Set Testing Set	1222	(1222, 168, 7)	(1222)
	308	(308, 168, 7)	(308)

- Datasets for each composer was split with an 80-20 percentage ratio for train-test split.
- The splits were then concatenated across composers to produce a combined training and testing set.

Label Encoding and Final Input Shape

- Labels are encoded to integers through dictionary mapping:
 - Bach: 0, Beethoven: 1, Chopin: 2, Mozart: 3.
- Feature arrays were expanded with a channel dimension (axis=-1) to allow compatibility with convolutional models:
 - Final input shape is (samples, 168, 7, 1).

Dataset	Final Shape	
X_train_final X_test_final	(1222, 168, 7, 1) (308, 168, 7, 1)	

Summary of Key Points

- This process has fixed size and standardized input data, which are ready for deep learning.
- Having combined datasets from multiple composers while maintaining shape consistency makes multi-class modeling ubiquitous.
- Articulation flags introduce expressive musical variations that extend beyond basic note properties.
- Sumzero-padding and truncation allow for compact handling of multi measure MIDI sequences that can be of variable length.
- Using expanded dimensions allows us to feed the data into convolutional neural networks or other architecture expecting channel-last input.

8.5 Detailed Observations and Comparison of CNN Models

1. CNN Base Model

Architecture & Training Summary: - A standard 3-layer CNN (fixed kernel sizes and filters). - Trained for 10 epochs. - Training accuracy was 100%, indicating possible overfitting. - Validation accuracy peaked at around $\sim 78.5\%$ before fluctuating. - Test accuracy was: 76.95%.

Observations: - Model overfits quickly (training accuracy was almost 1.0 by epoch 10). - Validation accuracy is much lower, indicating overfitting. - Class imbalance is evident with classification metrics.

Classification Report Highlights:

Class	Precision	Recall	F1-score
Class 0	0.96	0.93	0.95
Class 1	0.51	0.47	0.49
Class 2	0.60	0.21	0.32
Class 3	0.49	0.75	0.59

Macro Avg F1-score: 0.58 Weighted Avg F1-score: 0.76

2. CNN with Hyperparameter Tuning / Optimization

Architecture - Tuned hyperparameters include: - Conv kernel sizes: blend of (3x1) (3x3) (5x1) - Filters per conv layer: 16 to 256 - Dense units: 32 to 128 - Dropout loads were applied with rates between 0.2 to 0.4 - Learning rate ~0.0001 to ~0.004. - Best trial had val_accuracy: 80.2%.

Training & Results - Test accuracy: 80.19% best so far. - Classification report shows improved balanced performance across classification metrics.

Classification Report Highlights:

Class	Precision	Recall	F1-score
Class 0	0.97	0.97	0.97
Class 1	0.50	0.40	0.44
Class 2	0.42	0.36	0.38
Class 3	0.62	0.79	0.69

Macro Avg F1-score: 0.62 Weighted Avg F1-score: 0.80

3. CNN with Class Imbalance Handling

Training Summary: - Used class weight balancing during training. - Achieved training accuracy as high as 97.5%. - Validation accuracy reached a peak of ~80.5% lots of fluctuation. - Test accuracy was lower at 77%.

Classification Report Highlights:

Class	Precision	Recall	F1-score
Class 0	0.93	0.97	0.95
Class 1	0.46	0.56	0.51
Class 2	0.50	0.29	0.36
Class 3	0.54	0.50	0.52

Macro Avg F1-score: 0.58 Weighted Avg F1-score: 0.76

4. CNN with Regularization, Dropout, and EarlyStopping

Training Summary: - Implemented dropout and L2 regularization. - EarlyStop with a learning rate decay has been implemented. - Although training accuracy improved consistently, the validation accuracy was still low. - Validation accuracy peaked at $\sim 76.6\%$. - Early stopped at epoch 41. - Test accuracy: 75%.

Classification Report Highlights:

Class	Precision	Recall	F1-score
Bach (0)	0.95	0.93	0.94
Beethoven(1)	0.39	0.44	0.41
Chopin (2)	0.48	0.46	0.47
Mozart (3)	0.56	0.54	0.55

Macro Avg F1-score: 0.59 Weighted Avg F1-score: 0.76

Comparative Summary Table

Model	Test Accuracy	Macro F1-score	Weighted F1-score	Notes
CNN Base	0.7695	0.58	0.76	Overfits quickly, imbalance affects classes 1 & 2
CNN	0.8019	0.62	0.80	Best balanced performance
Hyperparameter				with tuning
Tuned				_
CNN with Class	0.7695	0.58	0.76	Improves recall for
Imbalance				minority classes
CNN with Reg +	0.7500	0.59	0.76	Regularization stabilizes
Dropout +				training, but validation
EarlyStopping				accuracy remains low

Architecture Overview of Best CNN Model (Hyperparameter Tuned)

Layer Type	Parameters
Conv1	16 filters, kernel size 3x1
Conv2	64 filters, kernel size 3x1
Conv3	192 filters, kernel size 5x1
Dense	96 units
Dropout	Rate 0.4
Learning Rate	0.00085

Final Best Model Selection from the various versions of CNN:

Selected Model: CNN with Hyperparameter Tuning **Justification:**

- Achieved highest test accuracy (80.2%) with balanced F1 scores.
- Better generalization due to reasonable regularization and dropout.
- Tuned architecture which optimized convolution kernel sizes, number of filters, number of dense units, and learning rate.
- Research found lingering class imbalance issues, but it has the best overall classification performance.

8.6 Detailed Observations and Comparison: LSTM Base Model vs Finetuned Bidirectional LSTM Model

1. Model Architectures

Model		Total	Trainable	
Name	Layer Details	Paramete	er P aramete	rsNotes

4. Detailed Observations

LSTM Base Model: - Architecture is simply stacked LSTM with dropout and two dense layers. - Moderate training and validation accuracy (\sim 68-71%). - Training and validation loss shows some variation but tends to decrease. - Significant minority class problems in classes (1, 2 and 3) seen by low precision and recall (\sim 0.38 - 0.46). - Class balancing probably not handled per se in baseline model. - Test accuracy and F1-scores reflect the class imbalance, and limited ability to generalise satisfactorily on the infrequent classes.

Finetuned Bidirectional LSTM Model - Use of bidirectional LSTM layers which enables the model to consider sequence context from the future and past steps which improves feature presentation. - Also added dropout layers and learning rate scheduling to reduce overfitting and make training more stable. - Explicitly incorporate strategies for dealing with class imbalance (i.e., possibly class weights, data augmentation, but details not in excerpt). - Higher total parameters (~550k) indicating greater capacity. - Improved training accuracy (~83%) and reasonable improvement in validation accuracy (~74%) and similar test accuracy (~75%). - Noticeable enhancements in precision, recall, and F1-score across all classes especially minority classes (1, 2 and 3). - The macro average precision, recall and F1-score metrics indicate overall improvement in balanced performance. - Probably aided by the learning rate reductions also, but did refine training near the end which helped stabilise validation accuracy and loss.

5. Summary Comparison Table

		Finetuned Bidirectional LSTM
Aspect	LSTM Base Model	Model
Model Type	Stacked LSTM	Stacked Bidirectional LSTM
Parameters	209,732	550,212
Epochs	20	24 (with LR scheduling)
Training Accuracy	~69%	~83%
Validation Accuracy	~71%	~74%
Test Accuracy	71.43%	75.00%
Handling Class	No explicit handling	Techniques applied (class weights,
Imbalance		dropout)
Performance on	Poor (precision/recall	Improved (precision/recall
Minority Classes	~0.38-0.46)	~0.44-0.68)
Overfitting Signs	Some fluctuation, no clear LR	Learning rate scheduling reduced
	scheduling	overfitting
Inference	Simple, less computational overhead	Larger, more computationally expensive

8.7 Final Conclusion with Best Model Selection and Comparison: CNN vs LSTM Models

Summary Comparison Table of Best CNN and LSTM Models

	Best CNN Model	Best LSTM Model (Finetuned
Aspect	(Hyperparameter Tuned)	Bidirectional LSTM)
Model Type	CNN with tuned conv layers,	Bidirectional LSTM with dropout,
	dropout, LR optimized	LR scheduling
Total	Moderate (~few hundred	~550,000
Parameters	thousand, exact count varies)	
Training	~10-20	24 (with learning rates reduction)
Epochs		
Test Accuracy	80.19%	75.00%
Validation	~80%	~74%
Accuracy		
Macro F1-score	0.62	0.62
Weighted	0.80	0.76
F1-score		
Dealing with	Some (some dropout and tuning,	Used explicit methods (class
Class Imbalance	no explicit weighting)	weighting and dropout)
Performance on	Moderate (decent F1 scores ~0.38	Same recall and F1 scores (~0.44 to
minority classes	to 0.69),	0.68) and better overall balance
Overfitted	Some overfitting as normal in	Less overfitting overall, due to
behavior	base CNN, though controlled by	learning rate scheduling and
	tuning (dropout, batch size)	dropout
Model	Moderate (faster inference time in	Moderate to large, more
Complexity	practice)	computationally expensive
Best Use Case	If spatial/local feature extraction	If sequence/context modeling is
	is important	important

Final Best Model Selection

Model	Justification
CNN Hyperparameter	- Best overall test accuracy (80.19%).
Tuned	
	- Best weighted F1-score (0.80) , indicating similar scores for
	all classes.
	- Good tuning on convolutional kernels and dropout for
	generalization.
	- Optimal model size, quicker training and inference.
Finetuned Bidirectional	- Better suited for manipulating sequence data with
LSTM	imbalanced classes.
	- Better minority class F1-scores, improved recall rate (to
	the class of interest mainly with classes 1, 2).
	- Somewhat lower overall accuracy (75%) and would appear
	to have a better score on the metrics on minority classes.
	- Model is more complicated and goes through longer
	training.

Future Improvements and Recommendations

Area	Suggestions
Class Imbalance	- Utilize explicit class weighting or focal loss during CNN training to
Handling	help minority class recall rates (e.g. possible to improve a minority
	classes recall rates from \pm 55% to 70%).
	- Apply data augmentation techniques to minority classes to improve
	diversity and augmented minority class input distributions.
Model	- Experiment with hybrid CNN + LSTM architectures that train on 2
Architecture	data modalities simultaneously to learn both spatial and sequential
	features.
	- Investigate transformer-based models to discover ways to improve
	modeling multi-modal context in time.
Regularization &	- Utilize learning rate search, scheduling, most effective in CNN
Optimization	models and use early stopping more in both models.
	- Use advanced regularization techniques (weight decay, batch norm,
	etc.) in both CNN and LSTM models.
Ensemble	- Employ an ensemble method to help combine the predictions from
Methods	the CNN and LSTM, i.e, use the strengths of both models to make
	predictions.
Training with	- Due to powerful resource constraints, we could not train with
Augmented Data	augmented data along with few more Deep Learning models. People
	whoever wish to consider this as a reference, think of an opportunity
TT .	to experiment with diverse models, that too with the augmented data.
Hyperparameter	- Fully automate hyperparameter search using techniques such as
Search	Bayesian optimization to improve inspection and coverage of
E-mlainabilite	hyperparameter search combinations.
Explainability	- Apply model interpretability techniques to visually and qualitatively learn about the features of the model that differentiate classed as well
	as errors made based upon what part of the input the model focused
	on when arriving at its predictions.
Deployment	- Optimize for size and latency for on- or embedded deployment to
Considerations	allow for real-time responses.
	anow for road time responses.
